As part of providing safe and reliable water to our customers, regular maintenance of the culinary water distribution system is needed to improve conditions within the water mains. TBID staff will be flushing the water mains by opening fire hydrants in selected areas of the water system. If you experience discolored water, please consider the following:

- Use discolored water to flush toilets, but avoid running the water through filters, hot water heaters, and washing machines.
- TBID does not recommend using discolored water to do laundry as it can possibly stain clothing.
- Wait an hour for the water to settle, then run COLD water at one tap for up to 15 minutes to see if it clears. If it does not clear, wait one hour, and try again. If the water runs clear, run water throughout the house to flush any sediment that may have been drawn into your pipes. Using cold water helps prevent discolored water and sediment from flowing through your water heater. Running irrigational sprinklers for 15 minutes is a very effective way to flush your system.
- If the water does not clear within a few hours, call the District customer service number at 801-968-9081.

***** For more information about discolored water, click on this [link](#).*****

We recognize that flushing can be an inconvenience for some people. Our crews do their best to keep the inconvenience to a minimum. TBID takes its responsibility as owner and operator of the system very seriously, including our responsibility to conduct regular maintenance on the distribution system.

We ask for everyone's cooperation and patience during this procedure.

Thank you!
